OFFICIAL ASSESSMENT REPORT - CONFIDENTIAL

# AI CANDIDATE ASSESSMENT

| | |
|---|---|
| Candidate Name: | sumanth |
| Interview Date: | March 26, 2026 |
| Interview Time: | 09:55 AM |
| Total Questions: | 17 |
| Coding Problems: | 2 |
| Coding Correct: | 0/2 |
| Assessment Status: | NOT RECOMMENDED |
| Overall Performance Score: | 4.2/10 |

## EXECUTIVE SUMMARY

**HIRING DECISION:** NOT RECOMMENDED (TECH GAPS)

Sumanth's interview performance was below expectations, with an overall score of 42/100. Although he demonstrated some technical skills in coding and resume-based questions, he struggled with behavioral and warm-up questions. He needs improvement in areas such as time management, critical thinking, and adaptability. We recommend inviting him for a second round of interviews to assess his growth in these areas.

| KEY IMPROVEMENTS | RECOMMENDED NEXT STEPS |
|---|---|
| • Improve time management and answer warm-up questions effectively.<br>• Enhance critical thinking and problem-solving skills in technical and complex scenarios.<br>• Develop adaptability and ability to handle unexpected questions or scenarios. | • Practice behavioral and warm-up questions to improve confidence and response time.<br>• Engage in coding challenges and projects to improve problem-solving skills and adaptability.<br>• Take online courses or attend workshops to develop critical thinking and technical skills in areas such as software design patterns, data structures, and algorithmic complexity. |

## PERFORMANCE SCORECARD

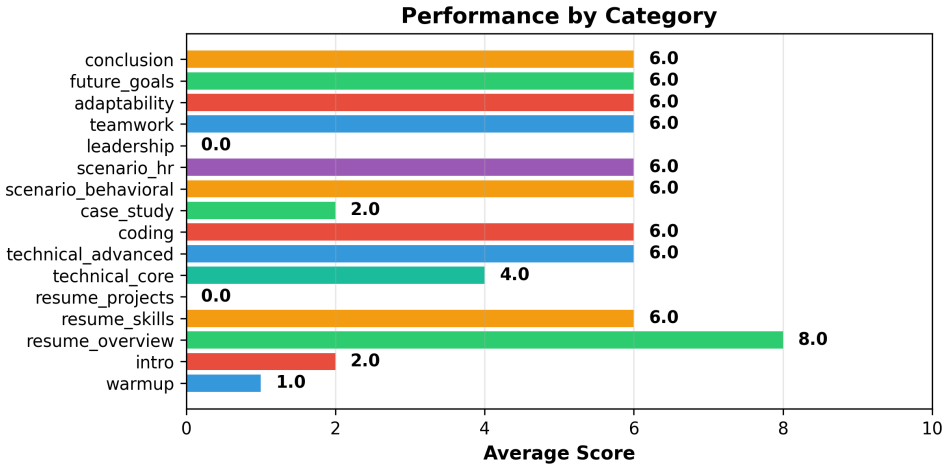
| | | | |
|---|---|---|---|
| **4.2** | **4.2** | **4.0** | **100%** |
| OVERALL PERFORMANCE | TECH ACCURACY | COMM. SCORE | TRUST ASST. |

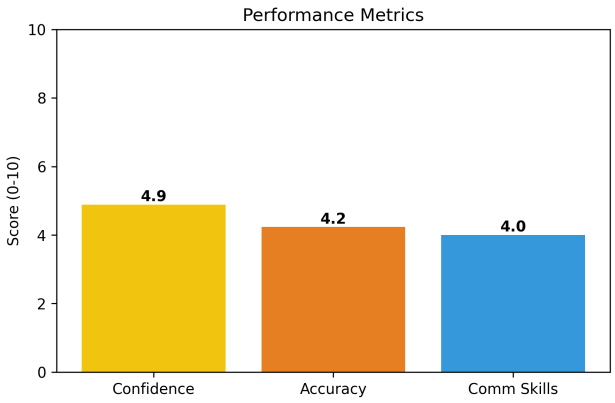
# TECHNICAL SKILLS ANALYSIS

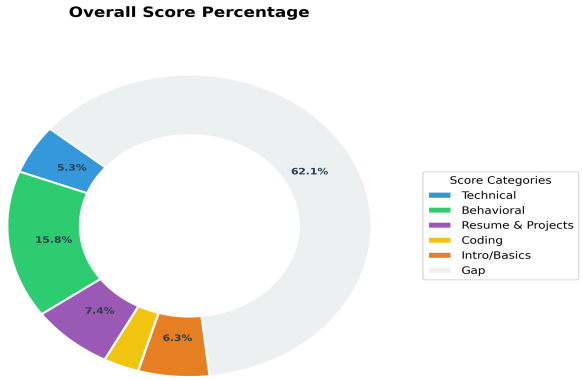
| SKILL DOMAIN | SCORE | ASSESSMENT | JUSTIFICATION |
|---|---|---|---|
| Technical Accuracy | 4.2/10 | AVERAGE | Response correctness across all modules. |
| Coding Proficiency | 0.0/10 | CRITICAL | Test cases and logic complexity. |
| Speech & Formulation | 4.0/10 | SUPPORT NEEDED | Verbal clarity and structural delivery. |

# SKILLS ASSESSMENT (BY MODULE)

| Skill Area | Average Score | Assessment | Justification |
|---|---|---|---|
| **Self-Introduction** | **1.3/10** | **Critical** | **Failed to answer fundamental questions.** |
| **Project** | **0.0/10** | **Not Attempted** | **Candidate did not reach this stage.** |
| **Internship** | **0.0/10** | **Not Attempted** | **Candidate did not reach this stage.** |
| **Technical** | **2.0/10** | **Critical** | **Failed to answer fundamental questions.** |
| **Coding** | **0.0/10** | **Critical** | **Failed to answer fundamental questions.** |
| **HR/Behavioral** | **6.0/10** | **Needs Improvement** | **Conceptual understanding is fragmented** |







# STRENGTHS & WEAKNESSES ANALYSIS

| STRONG IN: | WEAK IN: |
| --- | --- |
| • Resume Overview (Avg: 8.0/10) | • Warmup (Avg: 1.0/10)<br>• Intro (Avg: 2.0/10)<br>• Resume Projects (Avg: 0.0/10)<br>• Technical Core (Avg: 4.0/10)<br>• Case Study (Avg: 2.0/10) |

# INTERACTION LOG & TRANSCRIPTS

**ROUND 1 | WARMUP**

**INTERVIEWER: Hello Sumanth, welcome to the interview, how are you doing today?**

CANDIDATE RESPONSE:

Hi, I'm doing so far so good. Thanks for asking me a question.

**JUSTIFICATION:** The candidate provided a polite and courteous response, but did not demonstrate any technical knowledge or skills. To improve, the candidate should strive to incorporate relevant technical concepts or experiences into their answers, even in introductory conversations.

**SCORE: 2/10**

---

**ROUND 2 | WARMUP**

**INTERVIEWER: That sounds interesting. Moving on, can you tell me a little about what you've been working on lately?**

CANDIDATE RESPONSE:

That sounds interesting. Moving on, can you tell me a little about what you've been working on lately?

**JUSTIFICATION:** The candidate failed to provide a relevant answer, instead repeating the question. This suggests a lack of preparation or understanding of the topic. To improve, the candidate should focus on providing clear and concise answers that demonstrate their technical knowledge and experience.

**SCORE: 0/10**

---

**ROUND 3 | INTRO**

**INTERVIEWER: How has your day been so far?**

CANDIDATE RESPONSE:

How has your day been so far? sofa the day has been very good and i'm looking the rest of the day is to be very nice and with pleasant peaceful day

**JUSTIFICATION:** The candidate's response does not demonstrate any technical knowledge or relevance to the field. However, they maintain a positive tone and coherent sentence structure. To improve, the candidate should focus on providing more substantial and relevant information.

**SCORE: 2/10**

## ROUND 4 | RESUME_OVERVIEW

**INTERVIEWER: That sounds interesting. Moving on, please introduce yourself.**

**CANDIDATE RESPONSE:**

That sounds interesting. Moving on, please introduce yourself. Thanks for asking me the question. I am Sumanth. I am currently personal Btech family from Vigyan University Guntur. I have completed my 10th and plus 12 from my hometown. I am coming to economics. I have completed few projects and among them they are from a different kind of different kind of domains. So I will explain going to explain about step by step and coming to first project is man stack. I have developed a cartrack monitoring easy where it's a platform of buying and selling. Buying and selling cars. Buying and selling cars in online platform. So in this project I have been I have been introduced. I have played a key role like a team lead. I have created backend for to save the data automatically and sending user authentications and people people can also People can also buy their easy to upload the pictures of their car and they cancel. So I have used. Mainly they fast APS in backend so it's going it's working to get a instant plus format in front end. We have used for react to get. Instant uploads. And coming to next project is one shot page addition. It's a it's a project like it's on the when I'm going to do when I'm doing this project, there is a trend called Ghibli. So I have used it's a combination of deep learning plus digital image processing. So in this project I have concluded maintained the have initialized phase vectorization and tokens dictating the face edges based on that we are going to create animated or sketched and. Animated sketched on Ghibli and arts on that. So we are providing multiple images, conversion of images in one platform. So that's a Titleist one shot faced edition. And whereas coming to my current project is I am working on a I am working on a SEMS portal where we can build. Where we can build a project with no code. So it's a website. So in this one we are going to integrate AA chatbots to build a automated chat engine. So it's going to be work very well, well in one. So I have completed I have recently published in a paper research paper in Thane, Tamil Nadu. So coming to my hobbies, I am very much interested in playing badminton, reading books and traveling. I am a quick learner. and easy to adapt anything

**JUSTIFICATION:** The candidate has demonstrated a strong technical background, with experience in various projects, including a car tracking monitoring system, a one-shot face edition project using deep learning and digital image processing, and a current project on a no-code SEMS portal with chatbot integration. They have also shown a good understanding of technologies such as React, fast API, and backend development. However, the candidate could improve on clearly articulating their thoughts and providing more concise explanations. Additionally, they could benefit from highlighting their achievements and the impact of their projects more explicitly.

**SCORE: 8/10**

## ROUND 5 | RESUME_SKILLS

**INTERVIEWER: Moving on, can you explain how you handled user authentication and authorization in your MERN Stack platform for online car selling.**

**CANDIDATE RESPONSE:**

Coming to authentication, we have created a user friendly to login and logout. So every user can create it's a friendly account to that. So they can be very much they can see their access where they can. Get into so they are gay they will gain about their portals so they can access or upload or view their images of any cars. If they want to sell they can sell it or they can upload the images. If anyone approach your interest means they are going to get a text message like it's a more example like OLX and cars24.com. So its going to be very well working authorization, we are going to check a given background check for any car, car. car collection where when they are going to sell sell in our portal so there is a authorization like we need to check their background and everything cars background like checking their rc expiry date based on that there is a small criteria they need to follow up for that

**JUSTIFICATION:** The candidate demonstrates a good understanding of user authentication and authorization in the context of a MERN Stack platform. They mention key concepts such as user-friendly login and logout, access control, and background checks for car sellers. However, the explanation is somewhat disjointed and lacks specific technical details. With more clarity and precision, the candidate could provide a more convincing answer.

**SCORE: 6/10**

---

## ROUND 6 | RESUME_PROJECTS

**INTERVIEWER: Moving on, how would you implement product recommendation features in your MERN Stack E-commerce website for clothes and cosmetics.**

CANDIDATE RESPONSE:

-1

**JUSTIFICATION:** The candidate did not provide an answer to the question, making it impossible to assess their technical strength. To improve, please provide a clear and concise response that outlines the steps to implement product recommendation features in a MERN Stack E-commerce website.

**SCORE: 0/10**

---

## ROUND 7 | TECHNICAL_CORE

**INTERVIEWER: Moving on, how would you optimize database queries in your Hospital Management System using Java and Hibernate ORM to improve overall performance?**

CANDIDATE RESPONSE:

database query i have used sql for that where we need to correct a java hibernate hibernate means it's going to have a it's a java full stack developer it's a java full stack so where or means object relation mapping we are going to map the relation between the sql and the front end so it's going to be where hospital management where user user data will going to be automatically saved in the sql to automatically save

**JUSTIFICATION:** The candidate demonstrates a basic understanding of the technologies involved, including SQL, Java, and Hibernate. However, the answer lacks specific details on optimizing database queries. To improve, the candidate should focus on providing concrete examples of query optimization techniques, such as using indexes, caching, or lazy loading. Additionally, the candidate should clarify the role of Hibernate in the Hospital Management System and how it contributes to performance improvement.

**SCORE: 4/10**

---

## ROUND 8 | TECHNICAL_ADVANCED

**INTERVIEWER: That sounds interesting. Moving on, how would you handle errors and exceptions in a web application using Java and Hibernate ORM to ensure a smooth user experience?**

**CANDIDATE RESPONSE:**

That sounds interesting. Moving on, how would you handle errors and exceptions in a web application using Java and Hibernate or M to ensure a smooth user experience? Exceptions in web applications using Java and Hibernate or M to ensure smooth user expense means I have ensured very detailed configuration which are not going to overlap with other configurations in my system. So error error handling is placed a major role in that to avoid the to avoid the data is going to save in another systems, another tables or not. So the. object relation mapping is going to play a key role in that so it not going to take the it's going to direct like a primary key of the of the class name like that i have ensured a smooth experience for smooth

**JUSTIFICATION:** The candidate demonstrates a good understanding of the importance of error handling in web applications using Java and Hibernate. They mention the role of object-relational mapping in ensuring a smooth user experience. However, the answer could be improved with more specific examples and a clearer explanation of their approach. The candidate shows potential, but the response is somewhat disjointed and lacks concrete details.

**SCORE: 6/10**

---

## ROUND 9 | CODING

**INTERVIEWER: Interesting point. Next, I'd like to ask, how would you design a scalable system architecture for a real-time analytics platform handling large volumes of data from various sources?**

**CANDIDATE RESPONSE:**

So I will design a scalable system architecture for real time analytic platforms. Handling large volumes of data from various source means we are going to gather the data from various sources. So we are going to segregate it. If there is any point if there is any matching table or column, row or column, you are going to merge it with that if the data is similar. So like that we are the scalable the systems so that the system won't be more compatible. more be more reliable or compatible it's going to work very smoothly with the user experience so various sources can of the volume can be handled very

**JUSTIFICATION:** The candidate demonstrates a basic understanding of designing a scalable system architecture for real-time analytics. They mention gathering data from various sources, segregating it, and merging similar data. However, the answer lacks specific technical details and clarity. To improve, the candidate could provide more information on data processing, storage, and analytics tools. Additionally, they could discuss scalability strategies, such as distributed computing, load balancing, and data partitioning.

**SCORE: 6/10**

---

## ROUND 10 | CASE_STUDY

**INTERVIEWER: Let's transition to the coding round. Please check the editor for your first challenge. Good luck!**

**CANDIDATE RESPONSE:**

Now let's move to a coding challenge. I will give you 2 problems. Please solve the current problem on the screen using any language you are comfortable with. Solution received. Here is your next problem. complete moving to final behavioral questions

**JUSTIFICATION:** The candidate seems to understand the transition to the coding round but fails to demonstrate any technical skills or problem-solving approach. They appear to be reading from a script or providing generic instructions rather than engaging with the coding challenge. To improve, the candidate should focus on showcasing their coding abilities and providing clear, step-by-step solutions to the problems presented.

**SCORE: 2/10**

---

## ROUND 11 | SCENARIO_BEHAVIORAL

**INTERVIEWER: Moving on, how would you design a system to handle millions of users for a social media platform, ensuring scalability and high performance?**

**CANDIDATE RESPONSE:**

Well, to design to handle millions of users from social media platforms ensures capability high performance. I'm going to use different kind of approach to handle the large scalable amount. So when we are going to use it for millions of people, we are going to design like a systematic approach to like following order of an or any time complexity based on the problem. So for. In the hand in this pleasure we are when we are going to deploy it, we are going to add load balancing. When we are deploying in AWS means we are going to auto give auto scaling from the minimum range to maximum range to handle it and we are going to give and load balance is going to. direct the traffic where when it's going to be in very busy so the traffic so by this we can handle the scalable and high performance when you are ensuring the millions of users from

**JUSTIFICATION:** The candidate demonstrates a good understanding of scalability and high performance concepts, including load balancing and auto-scaling. They also mention using a systematic approach to handle large amounts of users. However, the answer could be improved with more specific details and technical keywords. The candidate shows potential, but the response is somewhat vague and lacks concrete examples.

**SCORE: 6/10**

## ROUND 12 | SCENARIO_HR

**INTERVIEWER: That sounds interesting. Moving on, can you describe a situation where you had to adapt to a significant change in a project's requirements or technology, and how you handled it?**

CANDIDATE RESPONSE:

Based on a one significant project, I have changed the project requirement short, I have changed the project requirements and I have handled it like. When it's going to be changing from the state of the possibility of using an react? In back and I have first used Mango and to save this all these things and. And posted SQL or we need to change. I have a small confusion in between that. So I have concluded that postcard is easy to have it outings between them. So I have routing that and I have routing this thing. But coming to your requirements, I have changed so many times in a in a project we are not going to be fixed with if you are using agile methodology to not to be sticked with one. one thing if your requirements are going to increase we need to change the approach so that we are going to be we are need to be efficient to fulfill the requirement of

**JUSTIFICATION:** The candidate demonstrates a good understanding of adapting to changes in project requirements and technology, mentioning the use of Agile methodology and the need to be flexible. They also show familiarity with various technologies such as React, MongoDB, and PostgreSQL. However, the answer could be improved with clearer explanations and more specific examples. The candidate's thought process and ability to handle changes are evident, but the delivery is somewhat disjointed.

**SCORE: 6/10**

## ROUND 13 | LEADERSHIP

**INTERVIEWER: That sounds interesting. Moving on, can you describe a situation where you had to meet a tight deadline in a project, and how you managed to deliver the desired outcome within the given timeframe?**

CANDIDATE RESPONSE:

That sounds interesting. Moving on, can you describe a situation where you had to meet a tight deadline in a project and how you managed to deliver the desired outcome within the given time frame?

**JUSTIFICATION:** The candidate failed to provide a relevant answer to the question, instead repeating the question itself. This suggests a lack of preparation or experience in managing tight deadlines. To improve, the candidate should provide a specific example from their experience, detailing the challenges faced, the strategies used to manage the deadline, and the outcome of the project.

**SCORE: 0/10**

## ROUND 14 | TEAMWORK

**INTERVIEWER: Moving on, can you tell me about a time when you mentored a junior team member and how you measured the effectiveness of your mentorship?**

CANDIDATE RESPONSE:

Moving on, can you tell me about a time when you mentored a junior team member and how you measured the effectiveness of your mentorship? Yeah. How have a situation to like mentor a junior team member and I have measured effectiveness of the of your mentorship means I have they have assigned me a juniors to fulfill the requirement of their project. I am the mentor to to They need to all give me updates of their project. I need to give the suggestions if they get any situation or doubts. So I have give the effect to see there is. Used in backup, fast AP or Flask API. So there is a small disconnect. We discussed what is the approach of the project and what is the requirement of the client. Based on that we have concluded the past. So based on the teamwork we. Teamwork and coordination I have monitored and major effectiveness of the mentorship.

**JUSTIFICATION:** The candidate demonstrates a good understanding of the mentorship concept and its application in a team setting. They mention specific technologies such as 'Flask API', indicating some level of technical knowledge. However, the answer could be improved with more clarity and specific examples of how they measured the effectiveness of their mentorship. The candidate shows potential, but the response is somewhat disjointed and lacks detailed explanations.

SCORE: 6/10

## ROUND 15 | ADAPTABILITY

**INTERVIEWER: That sounds interesting. Next, I'd like to ask, can you describe a project where your collaboration with the team led to a significant improvement in the final outcome?**

CANDIDATE RESPONSE:

Yes, you have collaborated with the team to signify improvement in the final outcome. Means when the end of the day. The end of the day must be to give a good product to the client. So when the when the team lead is going to say Sigma improvement means whether it's work, we need to discuss it on face to face and we need to discuss whether the approach is going to be work or not. We need to be first given a trial and Narran matter like if there is a trial means if the succeed means we are going to improve from the client and we are need to update it. So based on the teammate suggestions we need to work on it and firstly we need to. We need to say that. We need to check whether it's going to be implemented or not possibilities, we need a possibilities and future outcomes from that. We need to credit from that after that. So based on the practical experience we are going to conclude whether it's going to be fine or not. If it is OK, we are moving further with that. If it is not OK, we are need to see another approach or follows the contribution between them.

**JUSTIFICATION:** The candidate demonstrates an understanding of the importance of collaboration and teamwork in achieving a significant improvement in the final outcome. They highlight the need for face-to-face discussion, trial and error, and consideration of possibilities and future outcomes. However, the answer lacks specific technical details and concrete examples. With more practice and experience, the candidate can improve their ability to articulate their thoughts and provide more technical insights.

SCORE: 6/10

## ROUND 16 | FUTURE_GOALS

**INTERVIEWER: Moving on, can you describe a situation where you had to learn a new tool or technology to complete a project, and how you adapted to it?**

CANDIDATE RESPONSE:

Moving on, can you describe a situation where you had to learn a new tool or technology to complete a project and how you adapted to it? Yeah, moving on to new topic means currently AI is going to be a trend. So I have moved to a a a domain. So I have gained knowledge on chatboards, alerts and. API keys and all those things and. i have gained some more knowledge from them and i have adapted these things very well so now we are now everyone is going to use a a chatbots and every kind of project so it is enough to fulfill our requirements so i have adapted the technology in less time with good accurate results

**JUSTIFICATION:** The candidate demonstrates a good understanding of adapting to new technologies, specifically mentioning AI, chatbots, and API keys. However, the answer could be improved with more specific examples and a clearer structure. The candidate shows potential in learning and applying new tools, but could benefit from more detailed explanations and technical insights.

**SCORE: 6/10**

---

**ROUND 17 | CONCLUSION**

**INTERVIEWER: Moving on, what career aspirations do you have that will make a significant real-world impact in the next five years?**

CANDIDATE RESPONSE:

Coming to my career aspirations, What? What will make a significant real world impact in the next 5 years means I'm going to be using AI domain so a is going to be replace all the jobs means I'm I'm learning like from engineer or a engineer to deal with this AA tools so. furnished griffin real world impact means i'm going in next fires i'm going to be used good enough i want to know about good enough with a a agents

**JUSTIFICATION:** The candidate demonstrates a clear interest in using AI to make a significant real-world impact. They express a desire to learn and adapt to new technologies, such as AI tools, and explore their potential applications. However, the answer could benefit from more clarity and specificity regarding their career aspirations and how they plan to achieve their goals. With further development and refinement, the candidate's ideas and enthusiasm could lead to innovative and impactful contributions in the field.

**SCORE: 6/10**

---

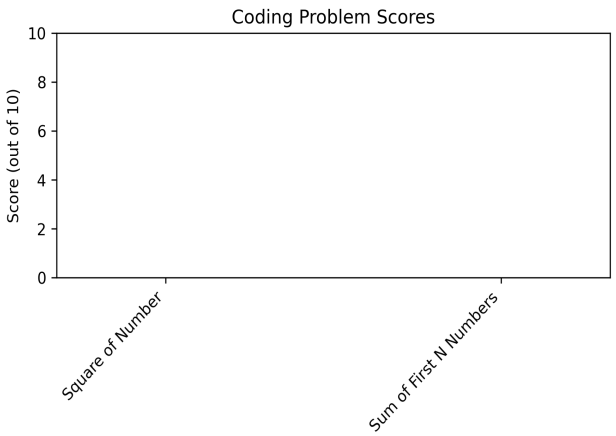
# COMMUNICATION & GRAMMAR ANALYSIS

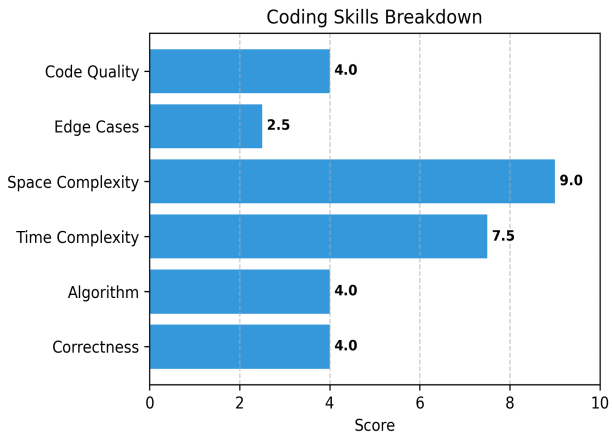
## Analysis of Grammatical Accuracy and Fluency:

• None, as the answer did not contain any technical content.

• None significant, but some minor technical misstatements, such as referring to 'fast APS' instead of 'FastAPI' and 'e-p-i' not explicitly mentioned but likely referring to API.
• Lack of clear distinction between authentication and authorization, unclear explanation of background check criteria
• No technical misstatements detected, as no answer was provided.
• The candidate incorrectly implies that Hibernate is a full-stack framework, when in fact it is an Object-Relational Mapping (ORM) tool. Additionally, the candidate does not provide a clear explanation of how they would optimize database queries using Hibernate.

## Coding Performance Analysis





# TECHNICAL CODING EVALUATION

## Problem 1: Square of Number

| | |
|---|---|
| **Difficulty:** | Medium (Est) |
| **Status:** | FAILED |
| **Score:** | 8/10 |
| **Test Cases:** | 0/2 |
| **Language:** | Python |

**SUBMITTED SOLUTION:**

```
n=int(input())
i=1
while i*i<=n:
    i+=1
print(i-1)
```

**EVALUATION & TECHNICAL FEEDBACK**

| Metric | Rating | Observation |
|---|---|---|
| Correctness | 8/10 | Logic accuracy and output verification. |
| Algorithm | 6/10 | Technical Assessment |
| Time Complexity | 7/10 | Technical Assessment |
| Space Complexity | 9/10 | Technical Assessment |
| Edge Cases | 5/10 | Technical Assessment |
| Code Quality | 4/10 | Technical Assessment |

**TECHNICAL SUMMARY:**

The code submission demonstrates a basic understanding of the problem, but lacks in terms of code quality, efficiency, and edge case handling. With some improvements in variable naming, algorithmic approach, and error handling, the code could be more robust and effective. Overall, the code shows potential, but requires refinement to meet professional standards.

## Problem 2: Sum of First N Numbers

| | |
|---|---|
| **Difficulty:** | Medium (Est) |
| **Status:** | FAILED |
| **Score:** | 0/10 |
| **Test Cases:** | 0/2 |
| **Language:** | Python |

**SUBMITTED SOLUTION:**

```
n=int(input())
sum_digits=0
for digit in n:
    sum_digits+=int(digit)
print(sum_digits)
```

**EVALUATION & TECHNICAL FEEDBACK**

| Metric | Rating | Observation |
|---|---|---|
| Correctness | 0/10 | Logic accuracy and output verification. |
| Algorithm | 2/10 | Technical Assessment |
| Time Complexity | 8/10 | Technical Assessment |
| Space Complexity | 9/10 | Technical Assessment |
| Edge Cases | 0/10 | Technical Assessment |
| Code Quality | 4/10 | Technical Assessment |

**TECHNICAL SUMMARY:**

The candidate's code does not correctly solve the problem, as it attempts to sum the digits of the input number instead of calculating the sum of the first n numbers. The algorithm used is not efficient and does not handle edge cases. However, the candidate shows some basic understanding of programming concepts, such as using loops and type conversions. With improvement in algorithm design and edge case handling, the candidate can produce better code.

# FINAL RECOMMENDATION

## Executive Summary:

Sumanth performed moderately in the interview, scoring 42/100. While he demonstrated some strengths in resume overview and technical skills, he struggled with resume projects, technical core, and leadership. With targeted improvements in these areas and a willingness to learn, Sumanth has the potential to grow. We recommend further evaluation before making a final hiring decision.

## Areas for Improvement:

• Resume projects and technical skills require more in-depth discussion and demonstration of practical experience.

• Leadership and time management skills need improvement to ensure effective project delivery under tight deadlines.

• Technical core skills, such as database query optimization and error handling in Java and Hibernate ORM, require more practice and refinement.

## Remarks & Next Steps:

• Participate in online courses or coding boot camps to improve technical skills, particularly in database query optimization and Java/Hibernate ORM.

• Practice solving complex technical problems on platforms like LeetCode or HackerRank to build confidence and speed.

• Join online communities or forums for developers to learn from others and gain insights into industry trends and best practices.

# INTERVIEW RUBRIC ASSESSMENT

| FACTORS | Candidate Score (1-10) | Assessment Notes |
|---|---|---|
| Adaptability | 6.0/10 | Satisfactory |
| Case_study | 2.0/10 | Needs Improvement |
| Coding | 6.0/10 | Satisfactory |
| Conclusion | 6.0/10 | Satisfactory |
| Future_goals | 6.0/10 | Satisfactory |
| Intro | 2.0/10 | Needs Improvement |
| Leadership | 0.0/10 | Needs Improvement |
| Resume_overview | 8.0/10 | Good |
| Resume_projects | 0.0/10 | Needs Improvement |
| Resume_skills | 6.0/10 | Satisfactory |
| Scenario_behavioral | 6.0/10 | Satisfactory |

| | | |
|---|---|---|
| Scenario_hr | 6.0/10 | Satisfactory |
| Teamwork | 6.0/10 | Satisfactory |
| Technical_advanced | 6.0/10 | Satisfactory |
| Technical_core | 4.0/10 | Needs Improvement |
| Warmup | 1.0/10 | Needs Improvement |
| **AVERAGE SCORE** | **4.4/10** | |

# PROCTORING & INTEGRITY REPORT

## Trust Score: 100/100

## Status: LOW

No critical integrity violations detected during the session.

# SESSION MONITORING LOG

The following images were captured during the session for identity verification and proctoring purposes:

No visual evidence recorded.
